

## **NX Aviation – The Innovation of Flight in Stafford County**

Stafford County Regional Airport has attracted a new entrepreneur to their aviation community. Colin Fischer developed the concept for NX Aviation in 2012. The company was located in Eastern Shore Maryland, where Colin was in flight school at a local airport. He began working with drones (Unmanned Aerial Vehicles - UAV) to develop custom PC boards, electrical harnesses, and software to optimize the drones for a single customer.

Colin is developing his business here, and will include modifying existing airplanes, developing software, and testing electric motors for airplanes. Colin joined Aviation Adventures at the airport as a flight instructor. Stafford County Department of Economic Development & Tourism provided information on our Business Services, and on the “start-up” programs information available through the UMW Small Business Development Center.

“Aviation has set the standard for innovation – taking us from Kitty Hawk in 1903, to the Moon in 1969, and high technology UAV’s and aircraft today,” stated Supervisor Gary Snellings, Hartwood District. “We welcome Colin to Stafford, and wish you success with your new venture.”
